

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a device made out of high quality materials intended to be able to withstand the most demanding operations and work environments. This piece of equipment can enable the one driving to be able to work the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate more accurate carrying and placement in a faster and much more efficient method.

The blade pocket is somewhat unique and can enable the operator to securely sway the forks into position without any worry of damaging the positioning cylinders. This allows the operator the choice to perform simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on existing units.
